live your dream

Polaris Digital Enterprise: Mobility Solutions

The High End Digital Transformation Experts

The Leaders in Enterprise Mobile Application Development

The growing need for digital transformation is impacting every aspect of today's enterprise. Polaris Digital Enterprise has helped some of the largest companies on the planet with their Digital Transformations. Our vast expertise in systems integration, enterprise content management, testing and prototyping, and omni channel delivery ensures a successful mobile app deployment from end-to-end with no gaps between channels.

We provide a highly integrated approach to enterprise digital transformation. Because we understand systems integration so well, we can make any and all enterprise data accessible in a responsive fashion on any mobile device - even your legacy data. Our UX business enables us to develop superior design; and our mobile testing services speed this process.

The World's Largest Enterprises and Financial Institutions Trust Polaris to Their Deliver Omni Channel Solutions

Having spent the last 3 decades solving the most complex integration and security problems for global banks and other large organizations, we know how to get it all working in concert without redundancies. We launch successful mobility applications that work well the first time.

Polaris Accelerates Your Enterprise Mobile Application Development

Our revolutionary Canvas technology and testing methodologies enable us to write an enterprise app once and then to translate it into multiple operating systems and versions within those systems. This enables digital enterprises to rapidly open new channels including mobile, web and remote locations. Our agile development process accelerates the rate at which customers can add features therefore, giving them a competitive advantage.

Mobile Apps That Boost Your Brand and Differentiate Your Company

By drawing on the strengths of our portal and usability engineering practices, our UX design teams, and our omni channel development group, Polaris develops mobile apps that delight your customers and employees. We develop responsive designs that work on any device whether mobile or tethered.

Strong Partnerships

We enjoy strong partnerships with all of the leading third party mobile application development tools. We have adapters and frameworks already built in-house for easy integration with your line of business (LOB) systems. Partners include:

Our many in-house software development centers of excellence (CoE) are integrated with one another – delivering the best products to our customers. We draw on the depth of the core functional specializations of our internal lab testing, portal design, mobility, ECM and UX development teams across our company in a design centre and prototype driven development model. Our talented staff of creative designers develop user interfaces that are easy to use and beautiful to look at. Polaris has Centers of Excellence in mobile, native and cross-platform apps for all key device platforms including iOS, Android™, BlackBerry®, Mobile Web, Windows Mobile and form factor rugged handheld, Smartphone, tablet.

Polaris helps you leverage the Mobile Cloud to improve scalability and reliability, and to collaborate and access business applications from virtually anywhere at any time, from any device or channel.

Enterprise Roadmaps and Strategic Guidance You Can Rely On

We provide the due diligence and out of the box thinking required to solve your problems in new ways. Polaris delivers application roadmaps and provides strategic direction to our enterprise customers as they embark on their digital transformations and mobility projects. Polaris' comprehensive suite of enterprise mobility services includes:

- **Mobile Consulting:** Offering expert advice for Enterprise mobility implementations provided by our full staff of Mobility Architects
- **Mobile Application Development:** Providing Mobile application development services across various devices/platforms
- **Modernization services:** Transforming desktop/web-based applications into mobile enabled, mobile first applications
- **Mobility Testing Services:** Providing mobile specific testing services targeting various devices and requirements for functional, technical and non functional requirements
- **Mobile Cloud:** Developing test solutions that are driven by 3rd generation testing methods for on-demand, global cloud-based solution.
